

# Enterprise Budgets

The Center for Crop Diversification has 18 enterprise budgets for various crops. Enterprise budgets are essential tools for both lenders and producers as they provide a detailed financial breakdown of the costs and revenues associated with a specific agricultural enterprise. Offering these budgets to producers, lenders, and business managers helps cultivate the CCD's mantra of Learn. Grow. Profit.

**Budgets are available for 27 crops:**

Asparagus	Cucumber	Potato
Apples	Eggplant	Pumpkin
Beans, Green	Gourds	Squash, Summer
Blackberries	Grapes	Squash, Winter
Blueberries	Okra	Strawberries
Broccoli	Peaches	Sweet Corn
Cabbage	Pepper, Bell	Sweet Potato
Cantaloupe	Pepper, Jalapeno	Tomato
Watermelon, Seeded	Watermelon, Seedless	Tomato, Cherry

“I rarely make a set of financial assumptions without using CCD budgets for specialty crop farmers. And when we calculate the producer's break even costs for a crop, it's a quick check of CCD price reports to see if the producer can make money selling the crop at the farmers market prices listed. It may kill dreams, but KCARD's use of CCD material may have saved a producer multiple thousands of dollars in expenses that could not have been recouped based on where the market was.”

**Spencer Guinn, KCARD**

**We provide large-scale and small-scale versions of our budgets to help meet the varied needs of the producer community in Kentucky.**
